

ROADMAP Model Card Editor

Create and edit ROADMAP-compliant JSON files for AI models and datasets

Gemini API Configuration

PDF extraction requires a Google Gemini API key. Your key is stored locally in your browser and never sent to any server except Google's Gemini API.

Gemini API Key:

.....

Your API key will be saved in browser localStorage for convenience.

 Save API Key

 Clear Saved Key

Don't have an API key?

Get a free Gemini API key in 30 seconds:

1. Visit [Google AI Studio](#)
2. Sign in with your Google account
3. Click "Create API Key" and copy it
4. Paste it in the field above

Free tier includes: 15 requests/minute, 1 million tokens/minute, 1500 requests/day

Dataset Card Information

✔ **Complete Form:** All fields are visible! Only "Name" is required - fill in what you have.

☒ Version

First release

Version designation of this resource

Dataset properties

properties

☒ Confidentiality

Raw k-space data were exported from the scanners, anonymized, and saved into a hierarchical data format 5 file.

Describes any data that might be confidential, such as those protected by law or doctor-patient confidentiality.

☒ External data

The raw data, clinical labeling information, data split, and repeated scan identifiers are available for free through <https://fastmri>.

Describes any external resources such as web sites, social-media posts or other datasets. Include information about their permanence, archival versions, and any restrictions on their use (e.g., data-use agreements, licenses, fees),

☒ Missing information

Individual race and ethnicity was not available for this dataset.

Describes what information, if any, is missing from the dataset and explains why it is missing (for example, because it was unavailable). Does not include intentionally removed information, but might include, for example, redacted text.

☒ Motivation

To address the unmet need for a publicly available radial acquisition dataset of breast DCE MRI that can be used for the develop

Describes the specific purpose for which the dataset was created. May include information about funding sources.

☒ Noise

Not described.

Describes any errors, sources of noise, or redundancies in the dataset.

☒ Partitioning scheme

Patient cases are split into training and testing cohorts at an 80:20 ratio, respectively. The ratio per lesion type was also kept as c

Describes how a dataset was partitioned for training, optimization (\validation") and testing.

☒ Re-identification

Data is anonymized. No specific re-identification risks are discussed.

Describes if and how it is possible to identify individual persons, either directly or indirectly, from the dataset.

☒ Relationships between instances

16 patients underwent a repeated breast MRI after a year. Repeated scan identifiers are available.

Describes if and how any relationships between individual data items are made explicit.

☒ Sampling

Retrospective collection of all 284 patients who underwent golden-angle radial DCE MRI as a part of clinical breast MRI examina

Describes how the data that form the dataset were selected.

☒ Sensitive data

The dataset includes patient age, menopause status, and clinical labels (reason for study, lesion status, malignant lesion type, lat

Describes any data that might be considered sensitive.

item 2

Lower or upper bound

item 1

Units

item 2

Units

Sex

 Demographic

Race / ethnicity (U.S. reporting categories)

 Criterion

Other subset criterion, such as reference-standard value, imaging finding, or other factor

 Comments

A Subset may describe all or part of a Dataset, Partition, or Subset

Dataset 1

Subset data by age, sex, race, and/or other criteria.

☐ Dataset properties

properties

☐ Confidentiality

Describes any data that might be confidential, such as those protected by law or doctor-patient confidentiality.

☐ External data

Describes any external resources such as web sites, social-media posts or other datasets. Include information about their permanence, archival versions, and any restrictions on their use (e.g., data-use agreements, licenses, fees),

☐ Missing information

Describes what information, if any, is missing from the dataset and explains why it is missing (for example, because it was unavailable). Does not include intentionally removed information, but might include, for example, redacted text.

☐ Motivation

Describes the specific purpose for which the dataset was created. May include information about funding sources.

☐ Noise

Describes any errors, sources of noise, or redundancies in the dataset.

☐ Partitioning scheme

Describes how a dataset was partitioned for training, optimization ("validation") and testing.

☐ Re-identification

Describes if and how it is possible to identify individual persons, either directly or indirectly, from the dataset.

☐ Relationships between instances

Describes if and how any relationships between individual data items are made explicit.

☐ Sampling

Describes how the data that form the dataset were selected.

☐ Sensitive data

Describes any data that might be considered sensitive.
